CONNECT Edition

# WaterGEMS<sup>®</sup> CONNECT Edition

Water Distribution Modeling and Management

WaterGEMS is a hydraulic modeling application for water distribution systems with advanced interoperability, geospatial model building, optimization, and asset management tools. From fire flow and constituent concentration analyses, to energy consumption and capital cost management, WaterGEMS provides an easy-to-use environment for engineers to analyze, design, and optimize water distribution systems.

WaterGEMS takes advantage of Bentley CONNECT services by associating a hydraulic model with a CONNECT project.

### **Superior Interoperability**

WaterGEMS users enjoy the power and versatility afforded by working across CAD, GIS, and stand-alone platforms while accessing a single, shared, project data source. With WaterGEMS, utilities and consultants can choose to model from within four interoperable platforms:

- Windows stand-alone for ease of use, accessibility, and performance
- ArcGIS for GIS integration, thematic mapping, and publishing
- MicroStation® for bridging geospatial planning and engineering design environments
- AutoCAD for CAD layout and drafting

# **Streamlined Model Building**

Engineers can leverage geospatial data, CAD drawings, databases, and spreadsheets to jumpstart the model building process. WaterGEMS provides synchronized database connections, geospatial links, and advanced model-building modules that connect with virtually any digital data format.

WaterGEMS includes LoadBuilder and TRex modules to help engineers allocate water demands and node elevations based on geospatial data found in shapefiles, geodatabases, various types of DEMs, and even CAD drawings. These modules help engineers avoid potential manual-input mistakes.

WaterGEMS also provides drawing and connectivity review tools to guarantee a hydraulically coherent model. Skelebrator<sup>®</sup> automatically removes network complexity, while maintaining hydraulic equivalence, to efficiently tackle a wider range of modeling applications.

# **Optimized Model Calibration, Design, and Operations**

WaterGEMS includes state-of-the-art genetic algorithm optimization engines for automated calibration, design and rehabilitation, and pump operations.

Darwin<sup>®</sup> Calibrator evaluates millions of possible solutions to let users quickly find a calibration hypothesis that best matches measured flows, pressures, and on/off

WaterGEMS runs in its stand-alone platform, and also within ArcGIS, AutoCAD, and MicroStation.

status, empowering users to make reliable decisions based on accurate hydraulic simulations of the real world.

WaterGEMS' SCADAConnect® module lets modelers automatically acquire supervisory control and data acquisition (SCADA) data, creating a real-time system simulator that accurately represents current system conditions. It also enables WaterGEMS model results to be published to a utility's existing SCADA control room screen(s), helping to forecast operating conditions and potential issues.

Darwin Designer automatically finds maximum benefit or minimum-cost designs and rehabilitation strategies, based on available budget, construction cost, and pressure and velocity constraints.

Engineers can also analyze energy consumption to identify the most energy efficient pump scheduling strategy. Darwin Scheduler optimizes the operations of fixed- and variable-speed pumps, and tank storage, to minimize energy usage or energy cost, based on pressure, velocity, pump start, and tank level constraints. Energy costs can be aggregated across pumping stations and factor in complex tariffs as well as non-model-related energy costs, to perform net present value analyses of their operating scenarios.

# **System Requirements**

Refer to the 'Installation Requirements' section of WaterGEMS' ReadMe file:

#### www.bentley.com/WaterGEMS-Spec

**Platform pre-requirements:** WaterGEMS runs without platform restrictions as a stand-alone application.

It also runs from within ArcGIS, AutoCAD, and MicroStation. The requirements are also available in WaterGEMS' ReadMe file.

# WaterGEMS At-A-Glance

## Interoperability, Interface, and Graphical Editing

- Runs from within four compatible platforms:
- » Stand-alone Windows
- » ArcGIS (ArcMap license required)
- » MicroStation (MicroStation license required)
- » AutoCAD (AutoCAD license required)
- Unlimited undo and redo
- Element morphing, splitting, and reconnection
- Merge nodes in close proximity tool
- Automatic element labeling
- Scaled, schematic, and hybrid environments
- Element prototypes
- Aerial view and dynamic zooming
- Named views library
- Multiple background-layer support

#### Hydraulics, Operations, and Water Quality

- Steady-state and extended-period simulations
- Constituent-concentration analysis
- Multi-species water quality analysis
- Tank-mixing analysis
- Water-age analysis
- Water quality batch run
- Criticality analysis
- Fire-flow analysis
- Rule-based or logical controls
- Variable-speed pumping, with option to use APEX (Automatic Parameter Estimation eXtension)
- System head curves
- · Leakage and sprinkler modeling
- Water loss analysis
- Pressure-dependent demands
- · Scenario modeling-based unidirectional flushing
- Source tracing
- Valve modeling
- · Air release valve element
- · Top fill tank element
- Combination pump curves
- Carbon emission calculation
- Optimization of pipe renewal with Pipe Renewal Planner
- Override of pump and valve controls using historical SCADA data
- Emergency response simulations for pipe breaks, power outages, fires, and pipe shutdowns

#### **Model Building and Data Connection**

- DGN, DXF, spreadsheet, database, and ODBC connections
- Shapefile, geodatabase\*, Geometric Network\*, and SDE\* connections (\*when running from within ArcMap)
- Oracle Spatial support
- GIS-ID property to maintain associations between records in the data source / GIS and elements in the model
- SCADAConnect 25-signal pack for live data connections (to and from SCADA systems)
- Graphical SCADA element
- Customer Meter element
- · Lateral link (no need to split pipes)

- Automatic demand allocation from geospatial data
- Geospatial demand allocation from customer meters
- Demand allocation from lump-sum geospatial data
- Geospatial-based water consumption projection
- Daily, weekly, monthly, and superimposed patterns
- Unaccounted for water and leakage estimation
- Composite demands global edition
- · Area, count, discharge, and population-based loading
- · Pipe-length-based demand loading
- Elevation extraction from DEM, TIN, and shapefiles
- Elevation extraction from CAD drawings and surfaces
- Series, parallel, branch-trimming, multi-criteria automated skeletonization of pipes
- Skeletonization support for isolation valves
- User-data extension, including formula based

#### **Model Management**

- Unlimited scenarios and alternatives
- · Comprehensive scenario management
- Global attribute tabular edition
- Pressure zone management
- · Automated model skeletonization
- Personalizable engineering libraries
- · Sorting and persistent filtering on tabular reports
- Statistical analysis from tabular reports
- Dynamic and static selection sets
- · Local and global engineering-units management
- Sub-model management
- Drawing review tools for connectivity consistency
- Automatic topology review
- Orphaned nodes and dead-end pipes queries

#### **Results Presentation**

- Thematic mapping with property-based color-coding, symbology, and annotations
- Dynamic, multi-parameter, and multi-scenario graphing
- Scenario and element comparison
- Shapefile contouring
- Advance profiling
- Advanced tabular reporting with FlexTables
- Creation of Google Earth (KML) files
- Publishing of i-models in 2D or 3D, including to Bentley Map<sup>®</sup> Mobile
- Video recording of result animation
- · Customizable reports
